

Profinder API

Keep customer data up to date

Data is valuable - but only, if it is up to date

Our API customers keep their CRM and other business systems updated with the latest Profinder data.

The Profinder API retrieves data directly from Finland's most comprehensive business and consumer databases. All data is delivered directly to your systems, and you can choose exactly which data fields to retrieve and use within your own applications and processes.

Save time and eliminate manual work by connecting Finland's most comprehensive business database directly to your systems.

B2B API provides dozens of data points in addition to company basic data

Business locations

Industry

Risk class

Decision maker contact details

Personnel class

Financial figures

The B2C API provides a seamless way to keep your customer, resident, or member data up to date

Residential area

Phone number

Name, address name, address information
